(54) Title: REPERTOIRE DETERMINATION OF A LYMPHOCYTE B POPULATION								
(57) Abstract: The present invention provides a process for determining the quantitative and qualitative profile of the repertoire of a given type of an immunoglobulin (Ig) heavy chain expressed by a lymphocyte B population present in a tissue sample, and kits and uses thereof. It also provides a set of VH forward primers associated with a CH reverse primer, which are respectively capable of specifically hybridizing in stringent conditions with the nucleic acids encoding the variable segments of Ig heavy chains and with the constant segment of a given type of Ig heavy chain, such as preferably IgM, IgG, IgE or IgA heavy chain. Methods for the <i>in vitro</i> diagnosis of a condition associated with an abnormal expression of the repertoire of a given type of Ig heavy chain, and for the <i>in vitro</i> follow-up of a treatment of such a condition, are also comprised herein.
